

FOR IMMEDIATE RELEASE: KS 2012 HEIGHT ADJUSTABLE SEAT POSTS

Foothill Ranch, CA April 2011:

KS USA ships 2012 seat post models worldwide.

Now in their 5th year of production, KS hydraulic height adjustable seat posts are more refined than ever offering customers some of the most reliable and best performing seat posts available on the market today.

KS has implemented several key changes for all seven 2012 seat post models including the Supernatural, Supernatural Remote, Supernatural Beam, Supernatural 272, Supernatural 272 Remote, Dropzone and Dropzone Remote.

The first of these changes includes a revision of the two X-ring seals seated on the internal floating piston. The seal tolerance has been tightened and the seal supplier has been changed from a Taiwanese maker to a Japanese maker. It is noteworthy that this Japanese seal manufacturer supplies seals to leading Japanese suspension manufacturers in the powersport and motorsport industries. The revised X-Ring seals are more resilient under pressure and better hold their shape in dynamic situations. In addition, this new supplier now provides the high pressure O-Ring seals housed in the valve assembly that actuates the cartridge plunger.

KS seat posts now utilize an alloy-backed DU bushing for a more precise fit. Inspection of how this DU mates with the stanchion tube is now performed 100% with a newly calibrated tester which measures the friction between the two components. The new DU and inspection method reduces the overall friction in the system which allows the seat post to use 20% lower air pressure resulting in improved performance, less seal wear and fewer service issues.

Also new for 2012 are updated graphics, packaging and owner's manual for an enhanced customer experience.

KS is a leading maker of height adjustable seat posts and suspension for high end mountain bikes. Seat posts and shocks are available in a variety of fitment and travel options. Please visit www.kssuspension.com or contact your local dealer for more information.
